Operator Information

VEOLIA ES Technical Solutions, LLC.
241 W. Laurel Street
Colton, CA 92324
(909) 370-0730

VEOLIA acquired Thermal Combustion Innovators (TCI) in February 2019.

VEOLIA ES Technical Solutions, LLC (VEOLIA) is a wholly owned subsidiary of VEOLIA North America and is in the business of medical waste collection, storage and transfer, transport, treatment and disposal. VEOLIA is operating as an off-site medical waste treatment and transfer facility serving generators of medical waste.

Compliance History:

No operational compliance violations with local, state or federal laws and regulations have occurred at VEOLIA's facilities over the last three years. VEOLIA's most recent inspection, resulted in no violation observed in its operations and deemed that it was in compliance with the requirements of the California Medical Waste Management Act.

Facility Information:

VEOLIA currently operates three autoclaves and the approximate maximum rated capacity is based from the manufacturer's estimate. VEOLIA could potentially treat up to 1,200 pounds per cycle for a single unit.

The three autoclaves for the treatment of medical waste according to procedures prescribed by the Medical Waste Management Act which the site will process all bio-hazardous and bio-sharp waste. In addition, VEOLIA has been approved to dispose of placenta waste using autoclave as an alternate treatment technology. All treatment technology utilized at VEOLIA uses steam sterilization and the autoclaves reach temperatures of 280 degrees. All waste that has been processed, will be placed in a compactor and disposed of in a landfill, generally within 24 hours.

VEOLIA's customer have shown interest in finding new methods for the treated medical waste since customer want to minimize impact in landfills. Depending on customer request and needs VEOLIA may bring treated medical waste for final disposition to a waste to energy site. This will only be used after the medical waste has been treated by VEOLIA and no longer meets the definition of medical waste.

VEOLIA may also store and transfer medical waste that requires to be treated, utilizing high heat treatment technology. VEOLIA employees will segregate waste and be stored on-site in transfer trailers which are refrigerated. These trailers are permanently stationed at the site.

VEOLIA employs various measures to prevent unauthorized material from being stored or treated at its facility.

First, VEOLIA provides comprehensive customer notifications, education services, in-service programs and packaging policies to our customers, and to prospective customers, delineating proper waste categories and packaging requirements.

Second, it is clearly stated in VEOLIA's service agreement with its clients that no other waste, other than medical waste, is to be presented to VEOLIA for collection and pickup.

Third, VEOLIA employs several "critical control check points" to monitor all waste received at VEOLIA and to discover any unacceptable materials that may have inadvertently been provided to VEOLIA.

The first critical control checkpoint is provided by trained VEOLIA drivers. Our drivers provide a cursory inspection of medical waste prior to pick up and transportation. They look for anything obvious to the naked eye. By example, when drivers remove the lid and visually inspect its contents, they sometimes discover loose sharps in barrels (not packaged in sharps containers), hazardous waste in barrels, formaldehyde in barrels, loose liquid (i.e. blood) on bags or in barrels, improperly packaged waste, etc.

Inappropriate waste or improperly packaged waste can on occasion be found by our drivers and subsequently rejected at the point of generation.

The second critical control point is that VEOLIA has developed and utilizes a unique barrel-waste color-coding and labeling system. All waste received at the facility is tracked to the generator's location. Barrels are color-coded red and properly labeled for biohazardous red-bag and sharps wastes, yellow for trace-chemotherapy waste, white for pathology/anatomical human tissue wastes and animal carcass/specimen wastes and gray for outdated/spent pharmaceuticals and medicines. Each barrel color group is marked with a different series of serial numbers. This system of barrel colors and labeling greatly enhances the accuracy level for proper waste segregation for appropriate treatment systems as prescribed by law.

The third critical control point is when medical waste is first off-loaded and staged at the VEOLIA treatment facility. Here, all waste is monitored for improper levels of radioactivity by plant personnel using a Ludlum Model 3 survey detector. VEOLIA is not authorized to accept or process radioactive material. All radioactive materials that was inadvertently received shall be returned to the generator by either a licensed radioactive waste transporter or by the generating facility's RSO (or designee) directly transporting the waste from VEOLIA back to their respective facility. Details regarding the survey meter is discussed in the monitoring and maintenance section of this document.

A fourth critical control checkpoint is within our transfer station activities. As waste is prepared for proper transfer, outside packaging surfaces are closely examined. Further, any waste not properly packaged or labeled is closely examined to determine what waste category it is. Any waste that does not look usual and customary is examined by VEOLIA supervisors. Pharmaceuticals are examined by supervisors, daily, for the express purpose of ensuring that no hazardous substances exist within the waste load. If any inappropriate waste is discovered, then the waste is temporarily replaced back into the barrel that it was picked up, the generator is promptly identified, the waste is moved to the holding area for inappropriate waste and VEOLIA management contacts the generator to determine either the appropriate steps to either return back to generator or with the permission of the generator, send to an appropriate hazardous waste treatment facility.

A fifth critical control checkpoint is performed after radiation scanning, waste weighing and staging of the waste for autoclave operations. Prior to waste being dumped into autoclave carts, waste is visually examined in the barrel with the lid removed. If anything looks out of the ordinary, not usual or customary, or contained in inappropriate medical waste packaging, the waste and the barrel are immediately set aside. A VEOLIA supervisor is summoned directly for assistance. A determination is made as to whether the waste is acceptable, or not. If not, then the waste is set aside as described above.

A sixth critical control checkpoint is utilized when the waste is dumped from the barrel into the autoclave cart. Waste packages are visually examined for anything that looks

out of the ordinary or inappropriate. A VEOLIA supervisor is promptly summoned for determination if waste initially appears inappropriate. If any waste is found inappropriate, then tools are used to retrieve the waste from the autoclave cart back into the VEOLIA barrel that originally contained the waste. Then, the above-described measures ensue.

A seventh critical control checkpoint is utilized by VEOLIA personnel to keep unauthorized waste from being deposited into a class III landfill, even though it has been treated by VEOLIA autoclaves. Once waste is autoclaved, bags holding the waste deteriorate and the waste lays open. When waste contained in autoclave carts is removed from the autoclave vessels after the operational treatment cycle is complete, the waste is visually examined. If any waste is found to be potentially questionable, then a VEOLIA supervisor is immediately summoned for a determination. If any waste is found to be inappropriate, it is removed from the autoclave cart by use of tools. It is then containerized into a VEOLIA barrel for temporary storage. The waste is not returned to the generator because at this point VEOLIA usually cannot determine who the particular generator was. VEOLIA bears the burden of having the waste properly repackaged and removed to an appropriate hazardous waste treatment facility by use of expert outside contractors who specialize in this field. If the generator of the waste can be determined, then the waste is returned back to the generator as previously described above. It is rare that VEOLIA finds inappropriate waste at the seventh critical control checkpoint.

Facility Site Plan:

VEOLIA's facility is located in the City of Colton, San Bernardino County, California in a designated and zoned industrial area. VEOLIA's operations meet the zoning criteria for this area and the general plan for land use in the City of Colton. This area is also within a State sponsored economic recovery zone, called the "San Bernardino Valley Enterprise Zone."

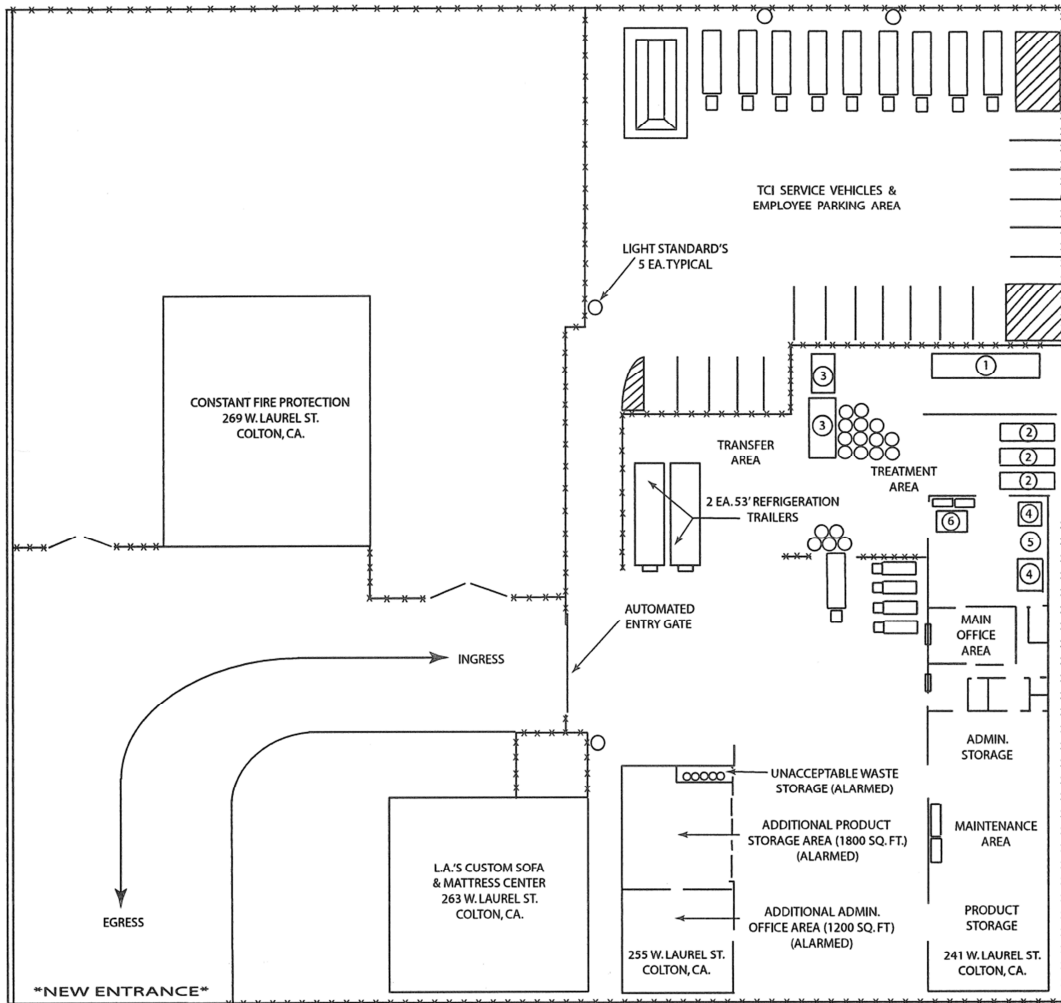

VEOLIA owns two separate but adjacent parcels of land that share a common ingress/egress easement with developed buildings and improvements. The Postal addresses for the two properties are 241 and 255 West Laurel Street, Colton, CA 92324. The 255 West Laurel Street property has a permanent City easement on the west side of the property which provides access for the underground utilities located in the alley easement. VEOLIA and the City maintain the easement and keep the area secured at all times. The City power station formerly located north of the 241 and 255 parcels has been removed and the area developed into parking for VEOLIA vehicles. This is shown in Appendix A: "Facility Site Plans."

The 241 West Laurel Street building is a 40' x 250' (10,000 ft²) metal building located on a parcel that is 100' wide (including 20' of shared easement) x 301' long. The outside medical waste treatment area containing autoclaves and other waste handling equipment is located directly North and behind this building. The treatment area is 100' wide x 65' deep, and is completely enclosed by a 6-foot high chain link fence, topped with sections of barbed wire. A 14 foot tall block wall is the eastern property boundary for this area. An asphalt parking lot and truck access area runs along the west side of the building, 80' wide and 150' long from curb to sliding gate of the treatment area. The 241 West Laurel building houses approximately 6,000 ft² of warehouse, repair shop and storage space and approximately 2,000 ft² of office space and 2,000 ft² of indoor building space housing two boilers, two barrel washers, a barrel washing area, waste storage area, a restroom, and a clothes washer and dryer. This building is fully sprinklered and contains seven fire extinguishers. The building has four roll-up doors and three man-doors for access.

The 255 West Laurel building is a 40' x 117' metal building situated on a parcel that is approximately 100' wide (including 20' of shared easement) x 301' long. The building is approximately 4,750 ft² with approximately 2,350 ft² of refurbished office space and 2,400 ft² of additional warehouse space used by VEOLIA. The office space in this building is secondary to that in the 241 West Laurel building. This building has three roll-up doors and three man-doors for access. The rest of the property to the rear of this building has a strong (4" thick) concrete slab. The area is used for truck parking and transfer station trailer. The property is bordered by a 6 ft high chain link fence topped with barbed wire for security. This building is used for storage of pharmaceutical medical waste under extremely secure conditions that include: lock and key with an alarm system featuring motion sensors, entry sensors, and broken glass detection features, monitored on a 24/7 basis. An access lock Knox box for emergency entry by fire and police personnel is also provided.

**MEDICAL WASTE TRANSPORTER/HAULER
ANNUAL VERIFICATION AND CONDITIONS**

July 21, 2020

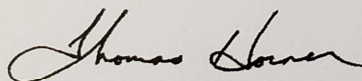

The California Department of Public Health, Medical Waste Management Program (Department), has confirmed your company is currently registered as a hazardous waste transporter with the Department of Toxic Substances Control (DTSC). The Department has also verified that your company is using a medical waste tracking document per CA Health and Safety Code (HSC) Section 118040. You are required to maintain your registration as a hazardous waste transporter and to abide by the conditions outlined on the enclosed page per HSC Sections 118000 – 118040. Transporters of medical waste who maintain their annual hazardous waste transporter registration with DTSC and submit medical waste hauling reports quarterly to the Department will be added to the list of current medical waste transporters provided on our website.

Hazardous Waste Transporter Registration Number: 3424
